

NCTM CAEP Standards (2012) Reviewer Rubrics – Elementary Mathematics Specialist (Advanced Preparation)

Standard 1: Content Knowledge

Standard 1: Effective elementary mathematics specialists demonstrate and apply knowledge of major mathematics concepts, algorithms, procedures, connections, and applications within and among mathematical content domains.

Program evidence of candidates' attainment of Standard 1:

- Assessments are aligned to *NCTM CAEP Mathematics Content for Elementary Mathematics Specialist*.
- Assessments, scoring guides/rubrics, and data charts are aligned with standard elements.
- Alignment to standard element(s) is provided within the rubric per criterion.
- Data charts are aligned with an assessment's scoring guide/rubric and report candidate performance by the level (individually scored items) at which it is collected.
- Assessments and scoring guides/rubrics contain discernible levels of performance.
- Assessments are required of all candidates.

Decision Criteria: Attainment of Standard 1 is based on three considerations:

- At least two assessments accompanied by candidates' performance data from a minimum of two applications for an initial report or a minimum of one application for a response to conditions or revised report and selected from:
 - o grades in required mathematics or mathematics education courses demonstrating at least an 80% alignment to each domain of the *NCTM CAEP Mathematics Content for Elementary Mathematics Specialist* and overall mathematics GPAs
 - transcript analysis (required for candidates where mathematics or equivalent coursework was not taken at program's institution) that includes course alignment to *NCTM CAEP Mathematics Content for Elementary Mathematics Specialist* and course data reported by individual candidate
 - o content-based assessment such as projects, course or clinical practice portfolio, or other course products demonstrating at least an 80% alignment to each domain of the *NCTM CAEP Mathematics Content for Elementary Mathematics Specialist* and accompanied by candidates' performance data
- Essential element for Standard 1: 1a
- A preponderance of evidence drawn from the elements
 - o SASB policy defines preponderance of evidence as "an overall confirmation that candidates meet standards in the strength, weight, or quality of evidence," rather than satisfactory performance for each element. A commonly accepted definition of preponderance of evidence is a requirement that more than 50% of the evidence favors a given outcome. NCTM program review decisions are based on the preponderance of evidence at the standard level. Specifically, more than 50% of the elements of each standard must be met at the acceptable or target level.
 - o Element 1a must be met at the acceptable or target level in order to satisfy the preponderance of evidence for Standard 1.

NCTM Element	Unacceptable	Acceptable	Target
Elementary mathematics specialist candidates:	Fewer than two assessments demonstrating at least an 80% alignment to each domain of the <i>NCTM CAEP Mathematics Content</i>	At least two assessments demonstrating at least an 80% alignment to each domain of the <i>NCTM CAEP</i>	At least two assessments demonstrating at least an 80% alignment to each domain of the <i>NCTM CAEP</i>

<p>Element 1a</p> <p>Demonstrate and apply knowledge of major mathematics concepts, algorithms, procedures, applications in varied contexts, and connections within and among mathematical domains (Number and Operations, Algebra, Geometry and Measurement, and Statistics and Probability) as outlined in the <i>NCTM CAEP Mathematics Content for Elementary Mathematics Specialist</i>.</p>	<ul style="list-style-type: none"> - Demonstrate knowledge of major concepts, algorithms, and procedures within and among mathematical domains (Number and Operations, Algebra, Geometry and Measurement, and Statistics and Probability) as outlined in the <i>NCTM CAEP Mathematics Content for Elementary Mathematics Specialist</i>. - Apply knowledge of concepts, algorithms, procedures, applications in varied contexts, and connections within and among mathematical domains as outlined in the <i>NCTM CAEP Mathematics Content for Elementary Mathematics Specialist</i>. - Explain how concepts, algorithms, procedures, and applications have developed. 	<ul style="list-style-type: none"> - Demonstrate knowledge of major concepts, algorithms, and procedures within and among mathematical domains (Number and Operations, Algebra, Geometry and Measurement, and Statistics and Probability) as outlined in the <i>NCTM CAEP Mathematics Content for Elementary Mathematics Specialist</i>. - Apply knowledge of major concepts, algorithms, procedures, applications in varied contexts, and connections within and among mathematical domains as outlined in the <i>NCTM CAEP Mathematics Content for Elementary Mathematics Specialist</i>. - Explain how concepts, algorithms, procedures, and applications have developed. 	<ul style="list-style-type: none"> - Demonstrate knowledge of major concepts, algorithms, and procedures within and among mathematical domains (Number and Operations, Algebra, Geometry and Measurement, and Statistics and Probability) as outlined in the <i>NCTM CAEP Mathematics Content for Elementary Mathematics Specialist</i>. - Apply knowledge of major concepts, algorithms, procedures, applications in varied contexts, and connections within and among mathematical domains as outlined in the <i>NCTM CAEP Mathematics Content for Elementary Mathematics Specialist</i>. - Explain how concepts, algorithms, procedures, and applications have developed. - Apply conceptual and procedural knowledge of major concepts, algorithms, and applications in building new knowledge from prior knowledge and experiences.

Standard 2: Mathematical Practices

Standard 2: Effective elementary mathematics specialists solve problems, represent mathematical ideas, reason, prove, use mathematical models, attend to precision, identify elements of structure, generalize, engage in mathematical communication, and make connections as essential mathematical practices. They understand that these practices intersect with mathematical content and that understanding relies on the ability to demonstrate these practices within and among mathematical domains and in their teaching and mathematics leadership.

Program evidence of candidates' attainment of Standard 2:

- Assessments, scoring guides/rubrics, and data charts are aligned with standard elements.
- Alignment to standard element(s) is provided within the rubric per criterion.
- Data charts are aligned with an assessment's scoring guide/rubric and report candidate performance by the level (individually scored items) at which it is collected.
- Assessments and scoring guides/rubrics contain discernible levels of performance.
- Assessments are required of all candidates.

Decision Criteria: Attainment of Standard 2 is based on three considerations:

- At least two assessments accompanied by candidates' performance data from a minimum of two applications for an initial report or a minimum of one application for a response to conditions or revised report and selected from:
 - o grades in required mathematics or mathematics education courses and overall mathematics GPAs
 - transcript analysis (required for candidates where mathematics or equivalent coursework was not taken at program's institution) that includes course alignment to *NCTM CAEP Mathematics Content for Elementary Mathematics Specialist* and course data reported by individual candidate
 - o content-based assessment such as projects, course or clinical practice portfolio, or other course products and accompanied by candidates' performance data
- Essential elements for Standard 2: 2a and 2b
- A preponderance of evidence drawn from the elements
 - o SASB policy defines preponderance of evidence as "an overall confirmation that candidates meet standards in the strength, weight, or quality of evidence," rather than satisfactory performance for each element. A commonly accepted definition of preponderance of evidence is a requirement that more than 50% of the evidence favors a given outcome. NCTM program review decisions are based on the preponderance of evidence at the standard level using this definition. Specifically, more than 50% of the elements of each standard must be met at the acceptable or target level.
 - o Elements 2a, 2b, and at least 2 additional elements must be met at the acceptable or target level in order to satisfy the preponderance of evidence for Standard 2.

NCTM Element	Unacceptable	Acceptable	Target

mathematical ideas to others.	communicate mathematical ideas to others.	communicate mathematical ideas to others.	communicate mathematical ideas to others. - Demonstrate an appreciation for mathematical rigor and inquiry.
Element 2c Formulate, represent, analyze, interpret, and validate mathematical models derived from real-world contexts or mathematical problems.	- Formulate, represent, analyze, and interpret mathematical models derived from real-world contexts or mathematical problems.	- Formulate, represent, analyze, and interpret mathematical models derived from real-world contexts or mathematical problems.	- Formulate, represent, analyze, interpret, and validate mathematical models derived from real-world contexts or mathematical problems. - Demonstrate flexibility in mathematical modeling when confronted with different purposes or contexts.
Element 2d Organize mathematical thinking and use the language of mathematics to express ideas precisely, both orally and in writing to multiple audiences.	- Organize mathematical thinking. - Use the language of mathematics to express ideas precisely, both orally and in writing to peers, teachers, or students.	- Organize mathematical thinking. - Use the language of mathematics to express ideas precisely, both orally and in writing to peers, teachers, or students.	- Organize mathematical thinking. - Use the language of mathematics to express ideas precisely, both orally and in writing to multiple audiences including peers, teachers, students, school professionals, and/or other stakeholders.
Element 2e Demonstrate the interconnectedness of mathematical ideas and how they build on one another and recognize and apply mathematical connections among mathematical ideas and across various content areas and real-world contexts.	- Demonstrate the interconnectedness of mathematical ideas and how they build on one another. - Recognize and apply mathematical connections among mathematical ideas and across various content areas and real-world contexts.	- Demonstrate the interconnectedness of mathematical ideas and how they build on one another. - Recognize and apply mathematical connections among mathematical ideas and across various content areas and real-world contexts.	- Demonstrate the interconnectedness of mathematical ideas and how they build on one another. - Recognize and apply mathematical connections among mathematical ideas and across various content areas and real-world contexts. - Seek opportunities to promote linkages of mathematical ideas in their teaching.

<p>Element 2f</p> <p>Model how the development of mathematical understanding within and among mathematical domains intersects with the mathematical practices of problem solving, reasoning, communicating, connecting, and representing.</p>	<ul style="list-style-type: none"> - Model how the development of mathematical understanding within and among mathematical domains intersects with the mathematical practices of problem solving, reasoning, communicating, connecting, and representing. 	<ul style="list-style-type: none"> - Model how the development of mathematical understanding within and among mathematical domains intersects with the mathematical practices of problem solving, reasoning, communicating, connecting, and representing. 	<ul style="list-style-type: none"> - Model how the development of mathematical understanding within and among mathematical domains intersects with the mathematical practices of problem solving, reasoning, communicating, connecting, and representing. - Reflect on how the mathematical practices of problem solving, reasoning, communicating, connecting, and representing impact mathematical understanding.
--	--	--	---

Standard 3: Content Pedagogy

Standard 3: Effective elementary mathematics specialists apply knowledge of curriculum standards for mathematics and their relationship to student learning within and across mathematical domains in teaching elementary students and coaching/mentoring elementary classroom teachers. They incorporate research-based mathematical experiences and include multiple instructional strategies and mathematics-specific technological tools in their teaching and coaching/mentoring to develop all students' mathematical understanding and proficiency. As teacher, lead teacher, and coach/mentor, they provide and assist teachers in providing students with opportunities to do mathematics – talking about it and connecting it to both theoretical and real-world contexts. They plan, select, implement, interpret, and assist teachers in the incorporation of formative and summative assessments for monitoring student learning, measuring student mathematical understanding, and informing practice.

Program evidence of candidates' attainment of Standard 3:

- Assessments, scoring guides/rubrics, and data charts are aligned with standard elements.
- Alignment to standard element(s) is provided within the rubric per criterion.
- Data charts are aligned with an assessment's scoring guide/rubric and report candidate performance by the level (individually scored items) at which it is collected.
- Assessments and scoring guides/rubrics contain discernible levels of performance.
- Assessments are required of all candidates.

Decision Criteria:

Attainment of Standard 3 is based on three considerations:

- At least two assessments based on course products or clinical practice artifacts such as lesson and/or unit plan(s), clinical practice evaluation, or portfolio and accompanied by candidates' performance data and accompanied by candidates' performance data from a minimum of two applications for an initial report or a minimum of one application for a response to conditions or revised report
- Essential elements for Standard 3: 3a, 3c, and 3f
- A preponderance of evidence drawn from the elements
 - o SASB policy defines preponderance of evidence as “an overall confirmation that candidates meet standards in the strength, weight, or quality of evidence,” rather than satisfactory performance for each element. A commonly accepted definition of preponderance of evidence is a requirement that more than 50% of the evidence favors a given outcome. NCTM program review decisions are based on the preponderance of evidence at the standard level using this definition. Specifically, more than 50% of the elements of each standard must be met at the acceptable or target level.
 - o Elements 3a, 3c, and 3f and at least 1 additional element must be met at the acceptable or target level in order to satisfy the preponderance of evidence for Standard 3.

Standard 4: Mathematical Learning Environment

Standard 4: Effective elementary mathematics specialists exhibit knowledge of child, pre-adolescent, and adult learning, development, and behavior. They use this knowledge to plan, create, and assist teachers in planning and creating sequential learning opportunities grounded in mathematics education research where students are actively engaged in the mathematics they are learning and building from prior knowledge and skills. They demonstrate, promote, and assist teachers in demonstrating and promoting a positive disposition toward mathematical practices and learning and exhibit and support the equitable and ethical treatment of and high expectations for all students. They include and assist teachers in embracing culturally relevant perspectives in teaching, in recognizing individual student differences, and in using instructional tools such as manipulatives, digital tools, and virtual resources to enhance student learning, while recognizing the possible limitations of such tools.

Program evidence of candidates' attainment of Standard 4:

- Assessments, scoring guides/rubrics, and data charts are aligned with standard elements.
- Alignment to standard element(s) is provided within the rubric per criterion.
- Data charts are aligned with an assessment's scoring guide/rubric and report candidate performance by the level (individually scored items) at which it is collected.
- Assessments and scoring guides/rubrics contain discernible levels of performance.
- Assessments are required of all candidates.

Decision Criteria:

Attainment of Standard 4 is based on three considerations:

- At least two assessments based on course products or clinical practice artifacts such as lesson and/or unit plan(s), clinical practice evaluation, or portfolio and accompanied by candidates' performance data from a minimum of two applications for an initial report or a minimum of one application for a response to conditions or revised report
- Essential elements for Standard 4: 4b, 4d, and 4e
- A preponderance of evidence drawn from the elements
 - o SASB policy defines preponderance of evidence as "an overall confirmation that candidates meet standards in the strength, weight, or quality of evidence," rather than satisfactory performance for each element. A commonly accepted definition of preponderance of evidence is a requirement that more than 50% of the evidence favors a given outcome. NCTM program review decisions are based on the preponderance of evidence at the standard level using this definition. Specifically, more than 50% of the elements of each standard must be met at the acceptable or target level.
 - o Elements 4b, 4d, and 4e must be met at the acceptable or target level in order to satisfy the preponderance of evidence for Standard 4.

NCTM Element	Unacceptable	Acceptable	Target

---	--	--	---

Standard 5: Impact on Student Learning

Standard 5: Elementary mathematics specialists provide evidence that as a result of their instruction or coaching/mentoring of teachers, elementary students’ conceptual understanding, procedural fluency, strategic competence, adaptive reasoning, and application of major mathematics concepts in varied contexts have increased. Elementary mathematics specialists support the continual development of a positive disposition toward mathematics. These mathematics specialists show that new student mathematical knowledge has been created as a consequence of their ability to engage students or coach/mentor teachers in mathematical experiences that are developmentally appropriate, require active engagement, and include mathematics-specific technology in building new knowledge.

Program evidence of candidates’ attainment of Standard 5:

- Assessments, scoring guides/rubrics, and data charts are aligned with standard elements.
- Alignment to standard element(s) is provided within the rubric per criterion.
- Data charts are aligned with an assessment’s scoring guide/rubric and report candidate performance by the level (individually scored items) at which it is collected.
- Assessments and scoring guides/rubrics contain discernible levels of performance.
- Assessments are required of all candidates.

Decision Criteria:

Attainment of Standard 5 is based on three considerations:

- At least two assessments based on course products or clinical practice artifacts such as lesson and/or unit plan(s), clinical practice evaluation, or portfolio and accompanied by candidates’ performance data from a minimum of two applications for an initial report or a minimum of one application for a response to conditions or revised report
- Essential element for Standard 5: 5c
- A preponderance of evidence drawn from the elements
 - o SASB policy defines preponderance of evidence as “an overall confirmation that candidates meet standards in the strength, weight, or quality of evidence,” rather than satisfactory performance for each element. A commonly accepted definition of preponderance of evidence is a requirement that more than 50% of the evidence favors a given outcome. NCTM program review decisions are based on the preponderance of evidence at the standard level using this definition. Specifically, more than 50% of the elements of each standard must be met at the acceptable or target level.
 - o Element 5c and at least 1 additional element must be met at the acceptable or target level in order to satisfy the preponderance of evidence for Standard 5.

NCTM Element In their role as teacher, lead teacher, and/or coach/mentor, elementary mathematics specialist candidates:	Unacceptable Fewer than two assessments or assessments provide little or no evidence that elementary mathematics specialist candidates:	Acceptable At least two assessments provide evidence that elementary mathematics specialist candidates:	Target At least two assessments provide evidence that elementary mathematics specialist candidates:
Element 5a	- Verify that elementary students demonstrate conceptual	- Verify that elementary students demonstrate conceptual	- Verify that elementary students demonstrate conceptual

<p>Verify that elementary students demonstrate conceptual understanding; procedural fluency; the ability to formulate, represent, and solve problems; logical reasoning and continuous reflection on that reasoning; productive disposition toward mathematics; and the application of mathematics in a variety of contexts within major mathematical domains.</p>	<p>understanding and procedural fluency.</p> <ul style="list-style-type: none"> - Verify that elementary students have the ability to formulate, represent, and solve problems. - Verify that elementary students reason logically and reflect on their reasoning. - Verify that elementary students have a productive disposition toward mathematics. - Verify that elementary students apply the mathematics they learn in a variety of contexts within major mathematical domains. 	<p>understanding and procedural fluency.</p> <ul style="list-style-type: none"> - Verify that elementary students demonstrate the ability to formulate, represent, and solve problems. - Verify that elementary students reason logically and reflect on their reasoning. - Verify that elementary students demonstrate a productive disposition toward mathematics. - Verify that elementary students apply the mathematics they learn in a variety of contexts within major mathematical domains. 	<p>understanding and procedural fluency.</p> <ul style="list-style-type: none"> - Verify that elementary students demonstrate the ability to formulate, represent, and solve problems. - Verify that elementary students reason logically and reflect on their reasoning. - Verify that elementary students demonstrate a productive disposition toward mathematics. - Verify that elementary students apply the mathematics they learn in a variety of contexts within major mathematical domains. - Demonstrate sustained and meaningful use of data to inform practice.
<p>Element 5b</p> <p>Engage students and coach/mentor teachers in using developmentally appropriate mathematical activities and investigations that require active engagement and include mathematics-specific technology in building new knowledge.</p>	<ul style="list-style-type: none"> - Engage students in developmentally appropriate mathematical activities and investigations that require active engagement in building new knowledge. - Coach/mentor teachers in using developmentally appropriate mathematical activities and investigations that require active student engagement in building new knowledge. 	<ul style="list-style-type: none"> - Engage students in developmentally appropriate mathematical activities and investigations that require active engagement in building new knowledge. - Coach/mentor teachers in using developmentally appropriate mathematical activities and investigations that require active student engagement in building new knowledge. 	<ul style="list-style-type: none"> - Engage students in developmentally appropriate mathematical activities and investigations that require active engagement in building new knowledge. - Coach/mentor teachers in using developmentally appropriate mathematical activities and investigations that require active student engagement in building new knowledge.

	<ul style="list-style-type: none"> - Engage students in developmentally appropriate mathematical activities and investigations that include mathematics-specific technology in building new knowledge. 	<ul style="list-style-type: none"> - Engage students in developmentally appropriate mathematical activities and investigations that include mathematics-specific technology in building new knowledge. 	<ul style="list-style-type: none"> - Engage students in developmentally appropriate mathematical activities and investigations that include mathematics-specific technology in building new knowledge. - Facilitate students' ability to develop future inquiries based on current analyses.
<p>Element 5c</p> <p>Collect, organize, analyze, and reflect on diagnostic, formative, and summative assessment evidence and determine the extent to which students' mathematical proficiencies have increased as a result of their instruction or their efforts in coaching/mentoring teachers.</p>	<ul style="list-style-type: none"> - Collect, organize, analyze, and reflect on diagnostic, formative, and summative assessment data. - Determine the extent to which students' mathematical proficiencies have increased as a result of their instruction or their efforts in coaching/mentoring teachers. 	<ul style="list-style-type: none"> - Collect, organize, analyze, and reflect on diagnostic, formative, and summative assessment data. - Determine the extent to which students' mathematical proficiencies have increased as a result of their instruction or their efforts in coaching/mentoring teachers. 	<ul style="list-style-type: none"> - Collect, organize, analyze, and reflect on diagnostic, formative, and summative assessment data. - Determine the extent to which students' mathematical proficiencies have increased as a result of their instruction or their efforts in coaching/mentoring teachers. - Use assessment results as a basis for designing and modifying their instruction as a means to meet group and individual needs and increase student performance.

Standard 6: Professional Knowledge and Skills

Standard 6: Effective elementary mathematics specialists are lifelong learners and recognize that learning is often collaborative. They participate in and plan mathematics-focused professional development experiences at the school and/or district level, draw upon mathematics education research to inform their practice and the practice of colleagues, continuously reflect on their practice, use and assist teachers in using resources from professional mathematics organizations, and demonstrate mathematics-focused instructional leadership.

Program evidence of candidates’ attainment of Standard 6:

- Assessments, scoring guides/rubrics, and data charts are aligned with standard elements.
- Alignment to standard element(s) is provided within the rubric per criterion.
- Data charts are aligned with an assessment’s scoring guide/rubric and report candidate performance by the level (individually scored items) at which it is collected.
- Assessments and scoring guides/rubrics contain discernible levels of performance.
- Assessments are required of all candidates.

Decision Criteria:

Attainment of Standard 6 is based on three considerations:

- At least two assessments based on course products or clinical practice artifacts such as clinical practice evaluation or professional development portfolio and accompanied by candidates’ performance data from a minimum of two applications for an initial report or a minimum of one application for a response to conditions or revised report
- Essential elements for Standard 6: 6c and 6d
- A preponderance of evidence drawn from the elements
 - o SASB policy defines preponderance of evidence as “an overall confirmation that candidates meet standards in the strength, weight, or quality of evidence,” rather than satisfactory performance for each element. A commonly accepted definition of preponderance of evidence is a requirement that more than 50% of the evidence favors a given outcome. NCTM program review decisions are based on the preponderance of evidence at the standard level using this definition. Specifically, more than 50% of the elements of each standard must be met at the acceptable or target level.
 - o Elements 6c and 6d and at least 1 additional element must be met at the acceptable or target level in order to satisfy the preponderance of evidence for Standard 6.

NCTM Element In their role as teacher, lead teacher, and/or coach/mentor, elementary mathematics specialist candidates:	Unacceptable Fewer than two assessments or assessments provide little or no evidence that elementary mathematics specialist candidates:	Acceptable At least two assessments provide evidence that elementary mathematics specialist candidates:	Target At least two assessments provide evidence that elementary mathematics specialist candidates:
Element 6a Take an active role in their	- Participate in professional development experiences that directly relate to the learning and teaching of	- Participate in professional development experiences that directly relate to the learning and	- Participate in professional development experiences that directly relate to the learning and

<p>professional growth by participating in professional development experiences that directly relate to the learning and teaching of mathematics and to their development as a mathematics instructional leader.</p>	<p>mathematics.</p> <ul style="list-style-type: none"> - Participate in professional development experiences that directly relate to their development as a mathematics instructional leader. 	<p>teaching of mathematics.</p> <ul style="list-style-type: none"> - Participate in professional development experiences that directly relate to their development as a mathematics instructional leader. 	<p>teaching of mathematics.</p> <ul style="list-style-type: none"> - Participate in professional development experiences that directly relate to their development as a mathematics instructional leader. - Assist their colleagues in developing a plan for implementing new learning from professional development or other experiences in their classrooms.
<p>Element 6b</p> <p>Engage in and facilitate continuous and collaborative learning that draws upon research in mathematics education to inform practice; enhance learning opportunities for all students' and teachers' mathematical knowledge development; involve colleagues and other school professionals, families, and various stakeholders; and advance the development in themselves and others as reflective practitioners.</p>	<ul style="list-style-type: none"> - Engage in and facilitate continuous and collaborative learning as a means of enhancing students' and teachers' learning opportunities in mathematics. - Use research in mathematics education to inform practice. - Enhance all students' and teachers' knowledge of mathematics. - Involve colleagues and other school professionals, families, and various stakeholders in the educational process. - Continue development in themselves and others as reflective practitioners. 	<ul style="list-style-type: none"> - Engage in and facilitate continuous and collaborative learning as a means of enhancing students' and teachers' learning opportunities in mathematics. - Use research in mathematics education to inform practice. - Enhance all students' and teachers' knowledge of mathematics. - Involve colleagues and other school professionals, families, and various stakeholders in the educational process. - Continue development in themselves and others as reflective practitioners. 	<ul style="list-style-type: none"> - Engage in and facilitate continuous and collaborative learning as a means of enhancing students' and teachers' learning opportunities in mathematics. - Use research in mathematics education to inform practice. - Enhance all students' and teachers' knowledge of mathematics. - Involve colleagues and other school professionals, families, and various stakeholders in the educational process. - Continue development in themselves and others as reflective practitioners. - Use resources, analyses of instruction, and professional development experiences to enhance students' and teachers' learning of mathematics.

<p>Element 6c</p> <p>Plan, develop, implement, and evaluate mathematics-focused professional development programs at the school and/or district level; use and assist teachers in using resources from professional mathematics education organizations such as teacher/leader discussion groups, teacher networks, and print, digital, and virtual resources/collections; and support teachers in systematically reflecting on and learning from their mathematical practice.</p>	<ul style="list-style-type: none"> - Plan, develop, implement, and evaluate mathematics-focused professional development programs at the school and/or district level. - Use resources from professional mathematics education organizations such as teacher/leader discussion groups, networks, and print, digital, and virtual resources/collections. - Support teachers in systematically reflecting on and learning from their mathematical practice. 	<ul style="list-style-type: none"> - Plan, develop, implement, and evaluate mathematics-focused professional development programs at the school and/or district level. - Use resources from professional mathematics education organizations such as teacher/leader discussion groups, networks, and print, digital, and virtual resources/collections. - Support teachers in systematically reflecting on and learning from their mathematical practice. 	<ul style="list-style-type: none"> - Plan, develop, implement, and evaluate mathematics-focused professional development programs at the school and/or district level. - Use resources from professional mathematics education organizations such as teacher/leader discussion groups, networks, and print, digital, and virtual resources/collections. - Use and share research-based resources from professional mathematics education organizations that positively impact student and teacher learning. - Support teachers in systematically reflecting on and learning from their mathematical practice. - Assist teachers in the implementation of newly acquired knowledge and professional practices in their mathematics teaching.

Standard 7: Elementary Mathematics Specialist Field Experiences and Clinical Practice

Standard 7: Elementary mathematics specialists engage in a planned sequence of field experiences and clinical practice under the supervision of an experienced and highly qualified mathematics educator. They develop a broad experiential base of knowledge and skills working with a range of student and adult learners including elementary students (e.g., primary, intermediate, struggling, gifted, and English language learners) and elementary school teachers, both novice and experienced, in a variety of school and professional development settings. They develop and use interpersonal and leadership skills to engage school-based and other professionals in the improvement of mathematics programs at the school and/or district levels.

Program evidence of candidates’ attainment of Standard 7:

- Descriptions of field experiences and clinical practice that include sequencing, levels, candidate responsibilities, qualifications of supervisors, and diversity of settings and students and that clearly address Elements 7a and 7b are included.
- Assessments, scoring guides/rubrics, and data charts are aligned with standard elements.
- Alignment to standard element(s) is provided within the rubric per criterion.
- Data charts are aligned with an assessment’s scoring guide/rubric and report candidate performance by the level (individually scored items) at which it is collected.
- Assessments and scoring guides/rubrics contain discernible levels of performance.
- Assessments are required of all candidates.

Decision Criteria:

Attainment of Standard 7 is based on four considerations:

- Information provided in Section I - Context #2 (Description of the field and clinical experiences required for the program) of the program report
- At least two assessments based on course or clinical practice products such as professional development plans, case work related to mentoring teachers, lesson and/or unit plan(s), clinical practice evaluation, and clinical practice or professional portfolio and accompanied by candidates’ performance data from a minimum of two applications for an initial report or a minimum of one application for a response to conditions or revised report
- Essential elements for Standard 7: 7a and 7b
- A preponderance of evidence drawn from the elements
 - o SASB policy defines preponderance of evidence as “an overall confirmation that candidates meet standards in the strength, weight, or quality of evidence,” rather than satisfactory performance for each element. A commonly accepted definition of preponderance of evidence is a requirement that more than 50% of the evidence favors a given outcome. NCTM program review decisions are based on the preponderance of evidence at the standard level using this definition. Specifically, more than 50% of the elements of each standard must be met at the acceptable or target level.
 - o Elements 7a and 7b must be met at the acceptable or target level in order to satisfy the preponderance of evidence for Standard 7.
